THE PARADISE OF TEARS.

ide the River of Tears, with branches low, I bitter leaves the weeping willows grow; I branches stream like the disheveled hair women in the sadness of despair.

he rolls the stream with a perpetual sigh; The rocks mean saily as it passes by; (iv-sep and wormwood booter all the strand, And not a flower adorns the dreary land.

Then conveniently, whose face is like the sun, And dipolitic gloomy waters in they run, And waters all the region, and behold? The ground is but at white blossons manifold.

issnot cami violets of heavenly blue. Hatering with the electrical deeps like dew

can of macriers, all whose to as an dried, , swans come enthreportly down the tile, a, up the adder sands by which it flows, -t in that language of Tears repose.

on every heart rejoins its kindred heart; i.e. in a long embrace that none may part, infliment meets desire; and that fair shore helds its dwellers happy evermore.

CURIOUS AND SCIENTIFIC.

HAND-KNIT goods manufacturers have held a meeting and agreed to hold their goods for higher prices, stopping produc-

thrus have become so numerous and corressive in Drownsville, Texas, that concrete efforts baye become necessary to rid the place of them. They took possection of stores where sugar and molasses were kept, stung everybody who tried to drive them away, and stayed until smoked out.

To prevent horses' feet from scalding or cracking in summer, and enabling the injury, the French practice is to coat the heats once a week with an ointment comseparately before mixing.

To PURITY A SINK .- In hot weather paration is used. One pound of copperas dissolved in four gallons of water, poured over a sink three or four times, will completely destroy the offensive odor. As a disinfecting agent, to scatter around the premises affected with any tupleasant odor, nothing is better than a mixture of four parts dry ground plaser-of-paris to one part of fine charcoal, by weight. All sorts of glass vessels and other utensils may be effectually purified from offensive smells by rinsing them with charcoal powder, after the grosser impurities have been scoured off with sand and soap.

VEGETABLE BEEFSTEAK.—The National Youd and Fuel Reformer says: Among the most remarkable esculents of this class may be mentioned the beef-steak fungus. It is very juicy and fleshy, and its sections resemble beef in siced and eaten with salad, and it is esteemed as a nutritions food. ther species, botanically known as perdan gigantense, when young, is of a deam-like consistence, and is an excel-lent addition to the breakfast menn. A shalle one is large enough to feed ten or twelve persons, and some members of the species are a good substitute for truffles. A specimen lately found weighed ten pounds, and was three feet four inches in circumference."

A HILLOFSULPHUR.—One of the most A HILL OF SULPHUR.—One of the most remarkable deposits of native sulphur as yet discovered is a great hill composed of the almost pure article, found some two years ago at a distance of thirty miles south of the Union Pacific railway and nine bendred miles west of Omaha. This magnetions deposit is found to gaussist at the committee of the reporter who magnetions deposit is found to gaussist. marvelous deposit is found to consist almost wholly of sulphur, containing only 15 per cent. of impurities. The best defended in the means by them. It posits heretofore available are those found in Sicily. The principal supplies for the manufacture of sulphuric acid comes from popular for exact expressions, but at any there; the deposits contain 35 per cent, of impurities and 64 per cent, of sulphur. Our western sulphur hill, therefore, is much the most valuable, and promises to a style of poetry which has found of late become, ere long, of great importance to no small acceptance, it is a mere crying the country ..

paper, giving some evidence regarding the temetry with which the small holds scholar and editor of university classics on to life, relates that a lady, having collected some with pretty marked shells, wished to preserve them. She therefore subjected them to a couple of boiling-water boths and left them on a shelf in a summer-house to dry. The next morning, to her surprise and dismay, she found the smalls crawling about the place, and some of the hungrier ones feeding upon the paste meant to be used in cementing ic shells together. The tender-hearted lady was so distressed at her unwitting eruelty that she sat down and had a good cry, ending with the resolve never to attempt small-boiling again. In 1774 an frish collector stated before the royal so-ciety that certain white smalls that had been confined in the cabinet for at least fifteen years poked their heads out of their shells and resumed their usual habits on being immerced in warm water.

ON THE HEREDITARY TRANSMISSION OF ACQUIRED DISEASE.--Brown-Sequard's wellknown discovery that epilepsy may be artificially induced in guinea-pigs by section of one or both sciatic nerves has been repeatedly confirmed, and the asser-tion subsequently made by tion subsequently made by the American Physiologist that this liability to epileptic fits was transmitted to the offspring of operated animals has also been found correct. Obersteiner recommends the actor-tion of this method for the study of the laws of heredity in relation to diseases of the nervous system. He divided his animals into three groups; in the first, a healthy male was paired with epileptic females; in the second, an epileptic male with healthy females; while in the third, both males and females were diseased. The young of these animals were reared and kept under observation for several months; the rusults obtained pointing to the conclusion that the influence of the female predominates over that of the male parent in the transmission of acquired epilepsy, and that the law of "transfor-nation of neuroses," so familiar to the student of human pathology, holds good in the case of epileptic guines pigs. Oberesteinr's experiments were too few in esteinr's experiments were too lew in number to serve as a safe basis for gener-alization, but his suggestion is a valuable one, and if carried out on a large scale-would furnish a body of facts of more in, portance for the determination of the nature and degree, of hereditary influence of the console me in my old age, who will send for circulars and our extra terms to Agents. ATIONAL REPLICITIES. one, and if carried out on a large scale

in the causation of disease, than any which we possess at present.

VENTILATION .- Ever since ventilation was first talked and written about, it has been a more or less obscure and uncertain subject; a subject on which it was easier to show what ought to be than what could be. We have, therefore, the more satis-

faction in calling attention to a paper by Dr. Francois de Chaumont, of the Army Medical School, Netley, which lays down definite principles of ventilation, and will enable any observant person to decide whether a building is properly ventilated or not. The paper in question—"On the theory of ventilation; an attempt to es-tablish a positive basis for the calculation of the amount of fresh air required for an inhabited air-space''—was read at a meeting of the Royal society, and has been published in their proceedings, and is thus available to all who desire to make use of

The basis taken by Dr. Francois de Chaumont is "the evidence of the senses," but with "proper care and precautions.", The poison in impure air, he remarks, is organic matter, either suspended or in the form of vapor; and it is this poison which imparts to air that disagreeable quality commonly described as "close." This closeness can be remedied only by dilubrate the captain sent have not read this necessary. ting the confined air with a quantity of fresh air; and to determine this quantity is one of the steps in a theory of ventilation, ation. Observation shows that the amount of organic impurity bears a fairly regu-To prevent horses' feet from scalding acid developed by the inhabitants in an air-space to be carried a longer time without plury, the French practice is to coat the quired to bring down the carbonic acid to posed of cound proportions of soit fat, some fixed standard. If, now continues the doctor, we adopt asour standard the fine and Norway tar; the wax is melted ence between the air of an inhabited space and the external air, and agree that this it is impossible to prevent sinks from be-coming foul, unless some chemical pre-sense of smell, our next step is to ascersense of smell, our next step is to ascer-tain from experiment what is the average amount of earbonic acid in such an air-space, from which we can then calculate the amount of air required to keep it in that condition. But as the sense of smell is very quickly dulled, each air-space to be examined ought to be entered directly from the open air."

By observations in hospitals and barrucks in different processing different processing different conditions.

racks in different parts of the country, Dr. Francois de Chaumont has arrived at conclusions, and obtained data on which to base his theory. Under the several heads: Fresh-fair—not close—close very close—extremely close, he records his observations in a way which will enable any one interested in the subject to test them for himself. The conditions laid down in the paper as "the standard of good ventilation" are, that the temperature should never be very much below sixty degrees—Vapor ought not to exceed fieshy, and its sections resemble need in appearance. A botanist found lately one of five feet in circumference, and weighing gracity eight pounds. This species of sixty-three degrees, or 500 grains at a temperature of sixty-five degrees—Humidity(per cent) ought not to exceed seymidth. midity(per cent) ought not to exceed seventy-three to seventy-five—Carbonic acid: respiratory impurity ought not to exceed 0.0002 per foot, or 0.2000 per thousand volumes. Another point established by this inquiry is that, where disease prevails, more fresh air is required than in health; hence, hospitals demand more pure air than barracks,—Chamber's doneral.

The Absurdity of Fine Writing.

People who use long words which they do not understand, instead of short words popular for exact expressions, but at any rate people who are able to weigh the force of words may begin by setting the example. Perhaps in the presence of in the wilderness to offer any such advice LONGEVITY OF SNAILS.-An English as this, and when a writer who has alprefaces a volume of poety with an address "To the Beloved," beginning,

"My holy love of many names
Whose face I have not seen,
With rosy dews and subtle flames
Anointed for a queen"—

we ought rather, it may be, instead of finding fault with some prevailing forms of indefiniteness in the use of words, to feel thankful that there is any language left which it is possible to understand at all .- London Saturday Review.

A DISCOURAGED SUFFOR.—He was a sad-eyed, meek-faced man, and we sup-posed he merely wished to give us a news item; but when he commen-ed telling us about building a barn on his ranch 190 by 280 feet, seven stories high, and ornamented by bay windows, we thought it was time to check him, and so we commenced:

"Well, we must admit that that is a pretty large barn for this country, but back in the states our fitther built a barn 325 by 500 feet, nine stories high, and furnished with steam elevators; the-

"Back in the states?" interrupted our listener, "Why that wasn't much of a barn for the states. I remember, now, that when I was quite young my father built a chicken-coop 550 by 832 feet. don't recollect how many stories it was high, but I know there was a cupola on it for the roosters."

"About how high|was the cupola" we

asked. "I don't remember the exact height now, mister," was the reply, "but I know it was so high that the fourteen upper tiers of roosters died from the effects of the light atmosphere the first

Then he looked up toward the ceiling and commenced humming "Jesus loves me," and we went out and sat down on the wood-pile and wondered why somebody was always outstripping us in the race of life.—Fairplay (Col.) Sentinet.

A PARTIAL SUPPRESSION OF POLYG-A PARTIAL SUPPRESSION OF POLYG-MANY.—Returning from the president's house, where he had been taking council, the old man remarked; "Samantha Hanner, to-morrow I shall

for as you have; you'll get baptized and

anointed, will you? I'll anoint you." And straightway she "laid on hands" and anointed his shining pate with the buisness end of a potato masher.

MANAGERS AND AUTHORS.-My first play was written when I was the dra-matic critic of the Herald, and was sub-mitted to the elder Wallack.

Aside from any other merits or de-merits, it would have played about ten hours. I need hardly add I had written it in two days.

The elder Wallack was as shrewd as he

was talented. He did not intend to pro duce my play, neither did he intend to offend the critic of the Herald, so in-San Francisco and effer it to a Chinese manager as a short farce, he gave it to my dear friend, Captain Jack Setton, whom I idolized, and asked him to read it and

The captain sent for me and said, "I have not read this, my dear Fiske, but I have weighed it. No good, my boy, no good?"

good." What could I do but accept the decision meekly? I could not yow vengeance against Captain Sefton, and Mr. Wallack's name was not even mentioned. But Lester put up his eye-glass and smiled at me as 1 lugged off my manu-script, and 1 rather believe that 1 got

even with him when he produced his "Rosedale," If not, why not?

Brevity came as my wits were sharpened, and at last Wallack did a piece of mine (from the French, of course), and then Captain Sefton and I did another piece together (also from the French), and all was happiness and joy; but I still firmly believe that my first original comedy—although perhaps a trifle too long—was the best thing I ever wrote. -Stephe Fiske in the London Hornet.

LEMON PIE.-Yelks two eggs, white one, juice and rind of one lemon, eight tablespoons sugar, hot milk added the last thing; bake and add when done the whites of two eggs, four spoons sugar well beaten, return to the oven and slightly brown.

—A Pennsylvania camp-meeting was recently broken up by six poor little skunks. The devil comes in various gui-

FIRST Grand Exposition of the Tradesmen's Industrial Institute, Pittsburg Pa., opens Oct. 7, closes Nov. 6, Address A. J. Nellis, Pres.

Gives no Trouble.

CHARTER OAK STOVES have large ovens; bake quickly and evenly, using but little fuel; easily managed, and so cleanly as to give no trouble.

Two or three doses of Sheridan's Cayary Condition Powders will cure a horse of any common cough or cold, and the very worst cases may be cured in a few weeks. We know this from experience.

THERE is no disease flesh is heir to more troublesome to manage than strumstism. It comes when you least expectit, and generally remains till it gets ready to go away. The most conspicuous remedy for this complaint is Johnson's Anodyne Liniment.

WE call the attention to the card of Mess. Buckwalter & Co., bankers and brokers, 10 Wall street, N. Y., whom we are informed are a most reliable firm, and that any business intrusted to them will be promptly executed. They are large dealers in railroad stocks, bonds, gold and stock privileges; and can give the best of references; and they solicit correspondence with any who may wish investments made in Wall street. Send for their circular.

Schenck's Pu monic Syrup, for the cure of Consumption, Coughs and Colds.

The great virtue of this medicine is that it ripens the matter and throws it out of the system, purifies the blood, and thus affects a cure.

Dyspersia, Indigestion, Etc. The Tonic produces a healthy action on the stomach, creating an appetite forming chyle, and curing the most obstinate cases of indigestion. SCHENCE'S MANDRAKE PILLS, FOR THE CURE OF

LIVER COMPLAINT, ETC.

LIVER COMPLAINT, ETC.

These Pills are alterative and produce a healthy action of the liver without the least danger, as they are free from calonel and yet more efficacious in restoring a healthy action of the liver.

These remedies are a certain cure for Consumption as the Pulmonic Syrup ripens the naster and purifice the blood. The Mandrake Pills act upon the liver, create a healthy bile, and remove all discusses of the liver, often a cause of Consumption. The Sea Weed Tonic gives tone and strength to the stomach, makes a good digestion, and enables the organs to form good blood; and thus creates a healthy circulation of healthy blood. The combined action of these medicines as thus explained will care every case of consumption, if taken in time and the use of the medicines persevered in.
